

Built Around the Process: Real Solutions for Concrete & Aggregate Teams

SAVVY SOURCE

Our Approach

Savvy Source isn't a cookie cutter software provider. We learn how your systems and processes work and build smart, targeted solutions that fit. Every project starts with one pain point, and from there we build momentum by delivering meaningful wins.

Here are three examples of real projects we've delivered for local suppliers:

Ticket Audit & Reconciliation

Delivery tickets are the backbone of billing. But when they're on paper, it's easy for them to go missing or be overlooked.

We built a solution that automatically captures scanned delivery tickets and matches them to what was dispatched. Any missing tickets are flagged for review, and the back office can catch handwritten edits or add-on charges before invoicing.

Faster dispute resolution

Easy access to signed documentation

Fewer missed charges

AP Matching for Po's, Packing Slips, and Invoices

Matching documents manually is tedious and often where errors creep in. We automated the three-way matching between purchase orders, packing slips, and vendor invoices. If everything matches, the invoice is approved automatically. If something doesn't, it's flagged for review.

Purchase Orders

System captures all PO details

Eliminates double entry

Packing Slips

Delivery documentation verified

More accurate accruals

Vendor Invoices

Final payment documentation

Faster approval cycles

AR Automation from Field to Finance

Delayed invoicing often starts with a disconnect between field work and back-office systems. We created a workflow that pulls job and ticket data directly into billing so invoices go out the same day work is completed, and payments are tracked through the full lifecycle.

- ☐ **Same-day invoicing**
- ☐ **Real-time visibility into receivables**
- ☐ **Fewer delays and better cash flow**

Start With a Conversation

Every one of these started with a conversation. We're local, flexible, and here to work with companies who value practical wins over canned solutions.
